**Dry Fly Innovations Updates**

**Dear Fly Fishing Enthusiasts**

Wow! What a spectacular spring season we have been enjoying. The South Fork is finally open and waiting for a nice Black Gold (#12 or #10) and the Owyhee River is fishing better now than in previous years. There is just something special about a PMD hatch in the mid afternoon or a nice evening caddis hatch. The Owyhee River right now is as vulnerable as it gets because there are monster hatches coming off daily.

Throughout the month of May there was some awesome fishing days with a few flies in particular. The Emperor Caddis (Black) is still living up to its hype of Dry Fly Innovations top fishing fly of 2009, it has been an absolute killer on the "Brownies." We have introduced two new flies in particular, the PMD No Hackle and the Callibaetis No Hackle, that are absolutely lights out on the Owyhee River. The Emperor Caddis (Green) has had its moments, and we cannot forget about the most innocent of them all, the Bare Belly Caddis (Green). We have three flies (Blood Midge, Microcaddis, & Callibaetis Cripple) that have been going through the rigorous R & D process and we have come to the conclusion that they belong in our fly catalog because they are fish catching machines.

For the month of June, here are a few hatches that will be coming off. There is monster caddis hatches coming off right now, and a tremendous PMD/ Callibaetis hatches. Towards the end of June there will be the first leading edge of "Big Stones" and Salmon Flies. Here is a list of flies that we would strongly recommend having in your fly box:

Keep up the good work and we look forward to hearing about your future successful fishing trips. We hope to see all you fly fishing enthusiasts out there saying "There he is"!!!!

Your fellow Fly Fishing Enthusiast,

*Geoff Brumley*
